---

Good afternoon,

I am following up on a referral from EPA Region 10 and Washington State Department of Health. Our office received a complaint alleging the misuse of disinfectants and sanitizers at your facility (Northwest Detention Center, Tacoma WA) are affecting human health. For us to conduct a fair investigation we need input from people within the facility that have first-hand knowledge of chemical use. I was directed to speak with you (the Fire and Safety Manager), but since I have not received a response to my voice messages, I am reaching out by email with a list of questions. Please answer the questions within the email (listed below) or the attached word document. After receiving your response, we may have additional questions and we may need to make a site visit. When would be the best time, and best phone number to reach you? Whom would I contact to arrange for a site visit?

Thank you,

Daleena Blair  
Investigator - Compliance  
WSDA Pesticide Management Division  
PO Box 42560, Olympia WA 98504  
(360) 584-4568

**Questions:**

-

**It is alleged more than one product is being used. Please answer for each product separately, unless it makes sense to combine responses (ie, products are mixed or used in the exact same way).**

-

**Product Identification:**

1. What sanitizing or disinfectant products are used in the facility? Include EPA REG number, if possible send copies of labels, SDS (Safety Data Sheets).
2. Are products "Ready to Use" or concentrates when you buy them?
3. Are products being used straight or diluted before use?

**Product Storage and mix/load:**

4. Describe the location where products are stored (and mixed if applicable).
5. Describe the process for mixing or diluting any products before use. (include rates, concentrations, who mixes, training given, etc.)

6. What PPE (Personal Protective Equipment) is provided for mixing? And do people use the PPE provided?

Application of Products:

7. What are the application procedures (include equipment used, timing of applications, who makes the applications, PPE etc.)
8. Are there different procedures for application in different areas (Bathrooms, kitchens, etc.)? Describe those.
9. What prep work is done before application? (regarding cleaning, timing, people present, training, etc.)
10. What happens in the treated area after product is applied?
